

**The Next Evolution in Veris' Popular E5x Family of Power & Energy Meters is here...
The E5xxxA Series with Built-in Integrator and Power Supply for Rope Style CTs**

Date: July 31, 2013

Tualatin, OR – Veris Industries, a leader in innovative power and energy monitoring solutions, has released the next evolution in their highly sought after E5x line of Power and Energy Meters, the E5xxxA Series. The E5xxxA Series combines the metering performance expected from the traditional E5x family with the addition of a built-in integrator and power supply for the needed rope style CTs.

“The new E5xxxA family is unlike any meter on the market today” stated Kevin Pack, Veris’ Energy and Industrial Product Manager. “Merging the power meter with the power supply and integrator needed for the associated rope CTs reduces the number of products to purchase, stock, and install greatly reducing overall project costs.”

The E5xxxA devices work exclusively with Veris’ *U018 Series rope CTs for quick and convenient installation. The U018 Series Rope CTs fit an array of applications with a wide measurement range of 20A to 5000A. For added flexibility the coil opens at the connector junction for easy installation onto an existing cable or buss-bar. The meters provide an integrated, easy to install, cost-effective solution with versatile protocol options including BACnet, Modbus, LON, or Pulse, as well as data logging and bi-directional capabilities.

*sold separately
