VERIS WIDENS THE COMPETITIVE GAP WITH THE INTRODUCTION OF THE NEW DUCT MOUNT CO₂ GAS SENSOR

PORTLAND, Ore – May 2, 2005 – Building owners and installers can now have the performance, output and quality they have come to expect from Veris' CO₂ gas sensing products at considerable labor savings, with the newly enhanced Duct Mount CO₂ sensor (CD series).

Historically, installation of a CO₂ sensor has been problematic, due to their many parts and awkward mounting designs. Recognizing this, Veris has revolutionized installation with the enhancement of the CD series.

The newly enhanced CD series is housed in a 1 piece, NEMA 4 plastic enclosure, designed for direct duct mounting. With the newly added features of a snap on face plate and a direct duct insertion probe, the need for screws and a remote pick up tube have been eliminated, significantly reducing installation costs.

The CD series is offered in an economy and deluxe model. Both offer the new enhancements and boast an innovative self-calibration algorithm. The deluxe units provide a field-selectable 4-20mA/0-5V/0-10-V output, LCD display, and an alarm relay output, along with an unmatched industry exclusive 5-yr warranty.

Delivering ease of use and a labor saving design, the CD series is the ideal sensor for any CO₂ gas monitoring application.

About Veris Industries

Veris Industries is a premier provider of energy and environmental products for the worldwide building automation industry, and is recognized for setting new standards in customer service and product innovation. For additional information on the enhanced CD Series, or any of Veris' industry leading products please call 1.800.354.8556 or send an email to sales@veris.com
